## DETAILED ACTION

### *Information Disclosure Statement*

1. The information disclosure statement has been received and considered. The references provided that are not in the English language have not been considered.
2. Applicant's request for reconsideration has been received.

### *Claim Rejections - 35 USC § 103*

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).
5. Claims 1-20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Wolfsteiner et al. '477 in view of Bohm et al. '694 or Blattert '729.

Regarding claims 1-20 Wolfsteiner et al. shows a brake actuator for rail vehicles with which applicant's are well familiar. Please see the drawings.

Lacking is a specific description of how the wear adjusting process works in this patent, specifically determining the actual stroke of the pads by measuring the path (i.e. distance or position of the actuator/pads) or by measuring the force or torque of the motor, or of the pads-- as they are applied against the disc.

However, these are well known methods in the art of adjusting the clearance of the pads as the device compensates for their wear.

The reference to Blattert in column 3 describes this and so does Bohm et al. in columns 2 and 3.

One having ordinary skill in the art at the time of the invention would have found it obvious to have applied the teachings of Blattert or Bohm to that of Wolfsteiner et al. to adjust the actuator for the wear of the brake pads.

The limitations in the rest of the claims if fairly taught by the combined teachings of the references and what is well known as shown by the prior art made of record. See specifically the other cited references to Bohm.

### ***Conclusion***

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. See the references to Bohm et al.
